

CAMS

COMPLIANCE & ASSESSMENT MANAGEMENT SOLUTION

CAMS is a web-based tool built to help organizations navigate compliance and assessment initiatives ranging from HIPAA compliance to CMMI gap analysis to detailed IV&V of ERP systems. CAMS starts with an **Assessment Module** that allows Assessors to manage data in a structured manner, *configurable to each unique project's assessment objectives*. Management is able to leverage the Assessment Module to *track progress of 1) assessment findings (compliance) and 2) assessment activities (assessment)* through both summary and detailed reporting.

Taking the overall process further, CAMS allows organizations to *act upon risks discovered during assessment* via the CAMS **Remediation Module**. Remediators are able to track status of the tasks that are being performed to address risks that were identified by Assessors. As assessments/risks are remediated, executive reporting is *updated in real-time to depict an accurate picture of the actual risk exposure faced by the organization*.

Finally, through the **Project Module**, CAMS allows Project Managers to *extend and organize both assessments and remediation* tasks into Milestones and Projects with the ability to assign work load and track project progress at both detailed and aggregated levels.
