

Organizational Transformation as a Service

Process Impact Blueprinting

Organizational Transformation Workshop

M&S Consulting leverages our Process Impact Blueprinting Workshops to initiate our projects. We use this approach as a kickoff to our projects, however, its methodologies are used throughout the lifecycle of a project for both Project Management and Business Analysis.

Process Impact Blueprinting is a framework to begin the journey of organizational transformation. It is the first step in developing a foundation and design for the future of an organization's business processes. It also sets the stage for proper change management around the three main pillars of change management: People, Process, and Technology. The blueprinting process allows a team to take inventory of current state processes, identify process waste, and contributing factors that cause the team to work harder than necessary.

Once the current state is defined, the team begins to design - or blueprint - what the foundation of the new process will look like. This blueprint is a clean slate to implement best practices, maximize the efficiency of the team, automate processes throughout the systems, and to ensure the process can scale as the organization grows. The newly defined processes need to be scalable and effective in helping to drive a positive customer experience, both internal and external. The team is encouraged to think BOLD, and to design a process that improves their experience as an owner of the end state.

The workshop is a design-led process that shifts the lens of organizational change towards the value proposition offered to the team to co-design a future state, and to create scalable and efficient processes.

SAMPLE AGENDA

**DAY
01**

- Why are we here?
- Current State Blueprinting

**DAY
02**

- Future State Blueprinting
- Linking the pieces together

**DAY
03**

- 30-60-90 Action Planning
- Leadership Read Out

Attendees & Goals

The Process Impact Blueprinting requires end users to be the primary attendees in the workshop. These team members are the front-line team members who know where the gaps are, what manual workarounds are being used, and who usually have the most bold ideas on how to remedy these pain points. We define these employees as ‘high-fliers’. It’s also important, from a people change management perspective, to have some high fliers who are adverse to change. They will be critical to the adoption of the change and will ultimately be the best ‘change ambassadors’ with their peers.

We recommend that the leadership be in attendance at the end of the workshop for a ‘Read Out’. The Read Out is an opportunity for the team to conduct a review of the current state and the data collected during Day 1. The team will then present their future state process to the leadership team and the reasoning behind their design. It allows for a strategic lens to ask questions and provide feedback during the Read Out. After the Read Out, the team defines what needs to occur in the next 30, 60, and 90 days as they begin their technology transformation.

CLIENT QUOTE

The process blueprinting workshops have really set the stage for each of our projects with M&S. It has really allowed us to think through our current processes, what we want and need from our future processes, and action plans on how to get there. It is a phenomenal opening act to kick off the work. I think it's made all of the difference in the success that we have experienced with the projects that we have undertaken with M&S versus others we've undertaken with other service integrators.

VP of Information Systems Management
Telecom Industry

Data Collection

- What is in Scope
- What is not in Scope
- Critical Success Factors
- Assumptions
- Bold Ideas
- Current State System/Tools
- Pain Points
- Parking Lot

Metrics **Subject to change based on processes being evaluated*

- Process Time (PT)
- Wait (Queue) Time (WT) or Lead Time (LT)
- First Time Quality (FTQ) and % Complete of accurate information
- Typical batch size (inventory)
- Number of people involved
- Reliability (system downtime)
- Rework/revisions (e.g. design changes)
- Queue - amount of ‘paperwork’ in queue

Deliverables

**Subject to change based on workshop scope*

- Process Impact Blueprint Workshop summary and visio drawings
- Project scope and high-level requirements for future state process blueprint
- Metrics to assess the success of the initiative
- Critical business decisions
- 30-60-90 day target objectives
